WiFi Stops Working Daily - [Solved]

2019/08/27

For the past month or so, I've noticed that when using my home WiFi on my phone, I will lose internet access a few times per day. Next to the signal strength bar, I get an exclamation point indicating that I am still connected to the router, but there is no internet available. Ruling out other issues: During these periods my Ethernet devices still work, I am within reach of a decent signal strength, and while I do have many people who live with me it still occurs when few are home and many of the devices we use are not connected. Also, the router is updated to the latest firmware and does not auto-update. What could the problem be? What else can I do to diagnose the issue? Thank you for your time.
